

VHS/III CONSTANT HEAT SEALER

VHS/III 400

PRODUCT DESCRIPTION

Our range of VHS/III are constant heat sealers featuring advanced solid-state electronics, to ensure strong seal on PP, cellulose, foil, and laminate bags. The double heated jaws, equipped with a temperature gauge reaching up to 200°C, provide precision and efficiency for a variety of heat sealing applications.

The constant heat sealer applies continuous heat to both the sealing jaws. They are always hot, even when not actively sealing, which can make them better suited to high-volume applications that demand a faster sealing speed. Used extensively throughout the coffee and food packaging industries.

Also available is the VHSB III 300, an easy, lever action benchtop constant heat sealer with temperature gauge. This hand sealer is suited to sealing polycello films, polypropylene, cellulose, foil, and laminate bags. It features top and bottom PTFE coated sealing jaws, both equipped with safety guards.

PRODUCT FEATURES

- All models come with double heated jaws.
- Servicing and spare parts available.

MODEL SIZES AND FEATURES

MODEL OPTIONS	SEAL LENGTH (MM)	SEAL WIDTH (MM)	SEAL THICKNESS (UM)	DOUBLE SEAL
